

INSTRUCTIONS FOR FUMIGANT APPLICATION RECORDS

Most fumigants currently used are restricted use pesticides and a record **MUST** be kept of each application, private or commercial. If this form is used, the legal requirements of the North Dakota pesticide laws will be met.

The application and safety equipment needed for an application will be determined by the label directions on the fumigant, i.e., an inside the structure/building application or one to an outside bin or railroad car. This form will work for either one. It is also designed to be used for applications made in-house (elevator or facility), on the farm or at a customer's location.

Please note that Grain Temperature is one of the information blocks. Fumigants have a temperature threshold below which they do not activate and the labels prohibit application at this lower temperature. It is important that this information be included.

ALL APPLICATIONS AND HANDLING MUST FOLLOW LABEL AND PRODUCT MANUAL DIRECTIONS.
