

INSTRUCTIONS FOR PESTICIDE APPLICATION RECORDS

This form is to be used for pesticide applications that do not involve fumigants or applications on right of ways. It can be used by the private applicator for recording the use of restricted-use pesticides and by commercial applicators for **all** pesticide applications.

The line, "Legal Description", would include a street address for a commercial yard care application or a farm mailing address for a bin or building treated in the yard.

In the line, "Crop applied to" may include a lawn, fruit trees, shrubs, buildings, etc.

Please remember, if the initial application has to be stopped for any reason, (health, weather, etc.) the record should be finished for that application when the spraying is stopped. A new record entry should be made whenever an application is restarted or begun. The record must be completed when the spraying is finished. Commercial and Private applicators must complete their pesticide application records by the end of each business day. This form allows up to four (4) applications to be recorded on one page. A separate application record should be made for each field that is being sprayed.
